Standup meeting summary:

Zack Salama:
- Yesterday: finished login, registration, and user authentification
- Today: Help Noah Schwadron fix the the way our Django database models are configured so we can move forward with programming the backend

Gongyuan Xing:
- Yesterday: worked on determining how the database tables (models) should be oriented to make pulling and pushing data easier in the app
- Today: work on figuring out the way django interacts with its database

Noah Rosenthal:
- Yesterday: worked on getting the front end to connect/interact with the backend
- Today: work on getting different site pages working together and establishing further interaction between the front and back ends

Noah Schwadron:
- Yesterday: setting up django database models, issue with onetoone relation between Django standard User model and appended info in our answers model
- Today: determine best way to deal with sqlite issue and move forward with programming the back end
- Hindrances to progress: once models are changed, how do you get sqlite file to reflect the changes?

Dylan Schneider:
- Yesterday: worked on the "game" of our website, correctly displaying questions and increasing the visual appeal of our site.
- Today: get front end of "game" to interact with backend and database
- Hindrances to progress: needs to wait for database to be intact/ correctly related before he can move forward
